Statistics: Mean 34.957; Variance 153.180; scale 0.228

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New DNA encoding an oviduct-specific glycoprotein - useful frecombinant protein production in high quantities.

Claim 4; Pages 16-18; 22pp; Japanese.

Q90444 encodes R73993 hamster oviduct specific glycoprotein The cDNA can be used for the commercial recombinant prodn. of HOGP in high quantities.

Sequence 668 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Peptide

New plant protein having endo-chitinase activity - used in antifungal compans. and to develop transformed plants which are less susceptible to fungal infection.

Claim 3; Page 19-20; 43pp; English.

Screening of a lambda ZAP cDNA library of TMV-infected Samsunn NN tobacco plants with a probe derived from PRO840 (a partial Cluster-A cDNA clone) resulted in the isolated of 11 positively hybridising clones. Analysis revealed that all were identical and corresp. to Cluster-A cDNA. The nt sequence of clone cA-3 is given in Q82973/ R70025. This clone lacks 7 codons of the 5' part of the ORE. The cDNA clone was completed by performing a PCR reaction on clone cA-3 with primer T7 (082794) and primer P1 (Q82975). A partial AA sequence of the protein isolated from TMV-infected tobacco leaves
                                                                                                                                                                                                                                                                                                                                                                      Peptide

New plant protein having endo-chitinase activity - used in antifungal compsns. and to develop transformed plants which are I antifungal compsns. and to develop transformed plants which are I less susceptible to fungal infection.

SC Claim 3; Page 25-28; 43pp; English.

Screening of a lambda ZAP cDNA library of TMV-infected Samsunn NN C tobacco plants with a probe derived from PROB40 (a partial Cluster-A CDNA clone) resulted in the isolated of 11 positively hybridising C clones. Analysis revealed that all were identical and corresp. to C cluster-A cDNA. The sequence of cDNA clone cA-3 is given in 082973/C R70025. A genomic library of N. tabacum was screened using the C cluster-A cDNA insert of clone cA-3 as a probe (see 082977, 082978).

The complete nt. sequence of Cluster-A cDNA including the deduced primary structure of the Cluster-A protein the 5 and 3 UTR regions C of the gene are shown in 082976/R70029. Comaprison of the cDNA

Such DNA can be coupled to sequence of interest, e.g. one coding for enzymes which confer resistance to pathogens (esp. endochitinases). Plant calli which have been successfully transformed by the sequences are selected by their ability to grow on oxalic acid-contg. medium. R56861 is a known sequence of a mature endochitinase; the sequence was

Three probes were designed based on the CH3C sequence, corresponding to the start, middle and downstream regions of the coding sequence. The probes were used to isolate the full-length coding sequence of A.album endochitinase from an A.album cDNA library in p7219R. A 1.6kb fragment was identified in several positive clones. The sequence of the fragment contained an ORF encoding a 423 amino acid protein. The mature endochitinase can be used to control pathogens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N-PSDB; Q37711, Q37712.

Recombinant DNA encoding fungal endo:chitinase - u protecting plants against fungi, insects, etc. Claim 1; Fig 1; 75pp; French.

Clone CH3C was isolated from a cDNA bank prepared
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              R33072

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant DNA encoding fungal endo:chitinase - useful for protecting plants against fung1, insects, etc. Claim 22; Page 60-61; 75pp; French.

This mature protein from the filamentous fungus Aphanocladium album has endochitinase activity and is used to control pathog such as fung1, bacteria, arthropods and nematodes on plants. Recombinant DNA comprising the endochitinase coding sequence specifically intended for transforming Nicotiana tabacum, Hell annus and Brassica napus to pathogen resistance. Sequence 389 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Periplasmic chitodextrinase;

Disclosure; Fig. 1A-1C; 20pp; English.

Serratia marcescens QMB1466 genomic DNA was partially digested, ligated into vector pLARR1, packaged into lambda phage particles, and used to transfect Escherichia coll DH1 (ATCC 33849) cells.

Plating on chitin medium was used to screen for chitinase activity. Clone C12 (ATCC 67152) was isolated. Its sequence is given in 276290, and the deduced protein sequence in R64823.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     18-JUL-1986; US-888033.

Disclosure; Fig.1; 13pp; English.

Plasmid pCHIT1251 containing the chitinase-A gene (chiA), fused directly to a nos promoter, may be used to transform, via Agrobacterium sp., a crop plant. The resulting transgenic plants expressing the chitinase-A protein fragment are protected against fungi, nematodes, insects and disease agents. The protein is preferably expressed by the plant only at the site of pathogen attack, e.g. only in the root cells. The plants express the chitinase in a biologically active form.

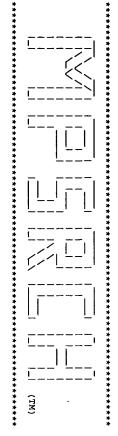

Sequence 561 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               04-SEP-1994 (first entry)
Bacterial chithase-A fragment from pCHIT1251.

Periplasmic chitodextrinase (W02156), periplasmic Beta-N-acetylglucosaminidase (W02157) and aryl Beta-N-acetylglucosaminidase (W02157) and aryl Beta-N-acetylglucosaminidase (W02158) can be used to produce chitin oligosaccharides with the structure (GlcNac)n where n is 2 or 'higher, by contacting them with soluble chitin. The enzymes are encoded by the genes endI, exoI and exoII respectively. They are all genes involved in the catabolic pathway of chitin.

Statistics: Mean 47.342; Variance 104.126; scale 0.455

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

8:part8 9:part9 10:part10 11:part11

Statistics: Mean 48.971; Variance 85.460; scale 0.573

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C. NATL. ACAD. SCI. U.S.A. 89:1548-1552(1992).
FUNCTION: THE MEI ANTIGEN IS A MICROFILARIAL CHITINASE, WHICH
FUNCTION TO DEGRADE CHITIN-CONTAINING STRUCTURES IN THE MICRO-
FILARIA OR IN ITS MOSQUITO VECTOR DURING PARASITE DEVELOPMENT
TRANSMISSION.
                                                                                                                                                                                                                                    KNOWN TO BIND CALCIUM.

DEVELOPMENTAL STAGE: THE APPEARANCE OF THE MET ANTIGEN CORRESPOND WITH THE ONSET OF THE PARASITE'S ABILITY TO INFECT THE MOSQUITO. SIMILARITY: BELONGS TO CHITINASE CLASS II (FAMILY 18 OF GLYCOSYL
                                                                                                                                                                                                                                                                                       N-ACETYL-D-GLUCOSAMINE PTM: O-GLYCOSYLATED.
                                                                                                                                                                                                                                HYDROLASES)

-I. FUNCTION: THE ALPHA SUBUNIT IS A POTENT EXOCHITINASE. ALONG WITH
THE BETA SUBUNIT IT PLAYS A ROLE IN THE INTERACTION OF THI
TOXIN WITH SENSITIVE CELLS AND ALLOW THE GAMMA SUBUNIT (THE ACTIV.)
TOXIN) TO GAIN ENTRY INTO THE CELL.

-I. PUM: RP2 IS POTENTIALLY SPLIT BY MEMBRANE-BOUND BASIC AMINO ACID-
-I. PUM: RP2 IS POTENTIALLY SPLIT BY MEMBRANE SUBUNITS.
-I. SUBUNIT: THE KILLER TOXIN IS COMPOSED OF THREE SUBUNITS: ALPHA,
BETA AND GAMMA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             01-MAR-1989 (REL. 10, CREATED)
